**Practice B** *continued*  
 For use with pages 262–268

29.  $p(x) = -\frac{1}{4}x$

30.  $d(x) = x - 1.5$

31.  $g(x) = x + 4.5$

**Match the function with the description of its graph in relation to the graph of  $f(x) = x$ .**

32.  $g(x) = 4x$

**A.** graph of  $f$  shifted up 4 units

33.  $g(x) = x + 4$

**B.** graph of  $f$  shifted down 4 units

34.  $g(x) = x - 4$

**C.** graph of  $f$  dilated by factor of 4

- 35. Video Games** The number of hours people in the United States spent playing video games each year from 1998 to 2001 can be modeled by the function  $f(x) = 11.9x + 46.4$  where  $x$  is the number of years since 1998.

- Graph the function and identify its domain and range.
- Find the value of  $f(x)$  when  $x = 2$ . *Explain* what the solution means in this situation.
- Find the value of  $x$  so that  $f(x) = 60$ . *Explain* what the solution means in this situation.

- 36. Pool Membership** A pool membership during the summer costs \$7 per week. The total cost of a membership is given by  $f(x) = 7x$ . The pool also rents out lockers for \$2 per week. The total cost of a membership and a rental is given by  $g(x) = 9x$ .

- Graph both functions. How is the graph of  $f$  related to the graph of  $g$ ?
- What is the difference between a 12-week membership if you get a locker and if you don't? *Explain* how you got your answer.
